Communicate with user

Communicate with user

Html forms

A collage of various HTML forms is displayed. The forms are layered and tilted, showing different styles and layouts. One form is titled 'Contact' and includes fields for 'Name', 'Address', 'Town/City', 'County', and 'Postcode'. Another form is titled 'Question' and includes fields for 'Question Title', 'Help Text', 'Question Type', and 'Their answer'. A third form is titled 'Delivery Details' and includes fields for 'First Name', 'Last Name', 'Address', 'Town/City', 'County', and 'Postcode'. There are also buttons like 'Done' and 'Make this a required question'.

Html forms

```
<form action="queries.php" method="POST">
  <div><label for="username">Username</label>
    <input type="text" name="username" id="username" /></div>
  <div><label for="password">Password</label>
    <input type="password" name="password" id="password" /></div>
  <div><input type="submit" value="Login" /></div>
  <div><input type="hidden" name="loginForm" value="" /></div>
</form>
```

Html forms – action

Page handling the request

```
<form action="queries.php" method="POST">
  <div><label for="username">Username</label>
    <input type="text" name="username" id="username" /></div>
  <div><label for="password">Password</label>
    <input type="password" name="password" id="password" /></div>
  <div><input type="submit" value="Login" /></div>
  <div><input type="hidden" name="loginForm" value="" /></div>
</form>
```

Html forms – method

Request method

```
<form action="queries.php" method="POST">
  <div><label for="username">Username</label>
    <input type="text" name="username" id="username" /></div>
  <div><label for="password">Password</label>
    <input type="password" name="password" id="password" /></div>
  <div><input type="submit" value="Login" /></div>
  <div><input type="hidden" name="loginForm" value="" /></div>
</form>
```

POST

Html forms – method

Request method

```
<form action="queries.php" method="POST">
  <div><label for="username">Username</label>
    <input type="text" name="username" id="username" /></div>
  <div><label for="password">Password</label>
    <input type="password" name="password" id="password" /></div>
  <div><input type="submit" value="Login" /></div>
  <div><input type="hidden" name="loginForm" value="" /></div>
</form>
```

POST vs GET

Html forms – inputs

Handle user inputs

```
<form action="queries.php" method="POST">  
  <div><label for="username">Username</label>  
    <input type="text" name="username" id="username" /></div>  
  <div><label for="password">Password</label>  
    <input type="password" name="password" id="password" /></div>  
  <div><input type="submit" value="Login" /></div>  
  <div><input type="hidden" name="loginForm" value="" /></div>  
</form>
```

other

Html forms – submit

Submit the form

```
<form action="queries.php" method="POST">
  <div><label for="username">Username</label>
    <input type="text" name="username" id="username" /></div>
  <div><label for="password">Password</label>
    <input type="password" name="password" id="password" /></div>
  <div><input type="submit" value="Login" /></div>
  <div><input type="hidden" name="loginForm" value="" /></div>
</form>
```

Html forms – labels

Easy access to input fields

```
<form action="queries.php" method="POST">
  <div><label for="username">Username</label>
    <input type="text" name="username" id="username" /></div>
  <div><label for="password">Password</label>
    <input type="password" name="password" id="password" /></div>
  <div><input type="submit" value="Login" /></div>
  <div><input type="hidden" name="loginForm" value="" /></div>
</form>
```

Forms – PHP part

`$_POST`

`$_GET`

Remember user's data

Database

SQL

Structured Query Language

```
SELECT isbn,  
        title,  
        price,  
        price * 0.06 AS sales_tax  
FROM Book  
WHERE price > 100.00  
ORDER BY title;
```

PHP Data Objects (PDO)

lightweight
consistent interface
for accessing databases

PDO – Classes

PDO

PDO – Queries

```
$st = $db->prepare  
("SELECT * FROM lists WHERE  
uID=:uID");  
  
$st->execute  
( array(':uID' => $userID) );  
  
$st->fetchAll  
(PDO::FETCH_CLASS, "MyList");
```

SQL Injections

HI, THIS IS
YOUR SON'S SCHOOL.
WE'RE HAVING SOME
COMPUTER TROUBLE.

OH, DEAR - DID HE
BREAK SOMETHING?
IN A WAY-

DID YOU REALLY
NAME YOUR SON
Robert'); DROP
TABLE Students;-- ?

OH, YES. LITTLE
BOBBY TABLES,
WE CALL HIM.

WELL, WE'VE LOST THIS
YEAR'S STUDENT RECORDS.
I HOPE YOU'RE HAPPY.

AND I HOPE
YOU'VE LEARNED
TO SANITIZE YOUR
DATABASE INPUTS.

Demo

Differentiate users

Differentiate users

sessions

HTTP is Stateless

Forgets user data after each request

Session

Session-id per user

Session

Session-id per user

Stored in a cookie

Session

Session-id per user

Stored in a cookie

Bind variables to session-id

Session

Session-id per user

Stored in a cookie

Bind variables to session-id

Stored in server

Session

Session-id per user

Stored in a cookie

Bind variables to session-id

Stored in server

Access them from different pages

Session – PHP part

`session_start ()` - in each page
(before **ANY** output)

`session_destroy ()` - clear data

Session – PHP part

`session_start ()` - in each page
(before **ANY** output)

`session_destroy ()` - clear data

`$_SESSION` - array with the
actual data
